DETAILED ACTION

Election/Restrictions

Applicant's election of 1-3 in Paper No. 11 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Specification

The use of the trademarks MARATHON-READY (p. 11, line8), PROMEGA (p. 13, line 25 and p. 17, line 15), for example, has been noted in this application. They should be capitalized wherever they appear and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

The specification is objected to as it contains a sequence on page 12, lines 17-18, that is not followed by a corresponding SEQ ID NO:. See 37 CFR 1.821-1.825.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1653

Claims 2 and 3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The language “functionally equivalent” is indefinite as it is unclear what are the metes and bounds of equivalent biological activity. The applicant defines “functionally equivalent” in the specification (p. 5, lines 5-10) as a protein that has “a biochemical and/ or biological activity equivalent to the natural protein”. This fails to clarify what the specific biological activities of the protein are.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-3 are rejected as they are directed to non-statutory subject matter. The language “[a] protein comprising . . .” could include any naturally occurring proteins, for example a protein found in a living organism in nature. Suggested language is: “an isolated protein comprising . . .”.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 1653

Claims 2 and 3 are rejected under 35 U.S.C. 102(a) as being anticipated by Zon et al. (US 5,700,927; cited in paper # 9). Zon et al. teach DNA that encodes a Tbc1 polypeptide which, like tesmin, plays a role in testicular regulation (col. 2, lines 11-19, 39-43 and col. 3, lines 23-34; see SEQ ID NOS: 1 and 2). By sufficient addition deletion and/ or addition of SEQ ID NO: 4 of the present application, one could obtain the protein of Zon et al. (present claim 2). This sequence would hybridize under some conditions to the DNA that encodes SEQ ID NO: 4 (present claim 3). Because it is involved in testicular regulation, the protein of Zon et al. is functionally equivalent to SEQ ID NO: 4. Thus Zon et al. teach all the elements of claims 2 and 3 and this claim is anticipated under 35 U.S.C. 102(a).

Conclusion

Claims 1-3 are rejected. No claims are allowed. It is noted that “an isolated and purified protein of SEQ ID NO: 4, which regulates testis differentiation” is free of the prior art.
